DETAILED ACTION

Preliminary Amendment

1. The preliminary amendment filed on 9/9/2004 has been entered.

Specification

2. The abstract of the disclosure is objected to because of legal phraseology "means" as recited throughout the abstract. Correction is required. See MPEP § 608.01(b).

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the claimed subject matter in claim 42 "the apparatus includes a control means for controlling the outlet flow" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering

Art Unit: 3754

of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 28-35,37-56 are rejected under 35 U.S.C. 102(b) as being anticipated by Souza 5,817,231.

Souza discloses water purification apparatus having an inlet and an outlet, and at least one water purification means thereinbetween as seen in Figure 1, wherein the outlet includes at least a first release means (156) and a second water release means (157), the first release means being operable at a first flow rate, and the second release means being operable at a second flow rate (col. 6, ll. 10-67 onto col. 7, ll. 1-67 onto col. 8, ll. 1-44), wherein the outlet includes further water release means as seen in Figure 1, wherein the water release means operate in parallel as seen in Figure 1, one or more pump (70), a recirculation system (col. 6, ll. 43-65).

The device shown by Souza will perform the method recited in claims 51-56 during normal operational use of the device.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 36 is rejected under 35 U.S.C. 103(a) as being unpatentable over Souza 5,817,231.

Souza has taught all the features of the claimed invention except that wherein the at least one water release means is operable at a relatively slow flow rate of up to 0.1 litres per minute, the at least one water release means is operable at a relatively fast flow rate of up to 2 litres per minute.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Souza's device to have the at least one water release means to be operable at a relatively slow flow rate of up to 0.1 litres per minute and at a relatively fast flow rate of up to 2 litres per minute, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. As per MPEP 2144.05

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Donovan et al. 5,918,773 disclose other type of water purification apparatus.
